Important Note about AD913 Transceiver Adapter

The AD913 connects to one of your transceivers to become the wireless 'base' so an appropriate cable must be made. The cable will connect the 6-pin XLR jack on the AD913 to your transceiver's headset jack. The jacks vary from make to make, with most being simple, but some are proprietary to the transceiver manufacturer. As a result, our cost for the mating plug varies. When ordering an AD913 please state the **make** and exact **model** of the transceiver you will use as a base. We will provide a quote at that time.

Cost Effective Packages of up to 10 Headset Stations

econoCom packages consist of BP1 belt packs, with full signaling capability, and Value-series headsets, complete with connectors. The ECADAPTER is unique. It is a desk-top (rather than wall plug-in) AC to DC adapter which powers the PS4 Power Supply. The PS4 regulates, limits and conditions the 24VDC required by the system and provides the essential 200W termination point. The PS4 is housed in the same rugged aluminum cabinet as the BP1 belt packs. The PS4 and ECADAPTER can supply up to 10 belt packs and, with fewer belt packs, a loudspeaker station. The PS4 has 3 XLR outputs, in parallel, which provide three starting points for the single common circuit. econoCom, except for the ECADAPTER and the headsets, is manufactured in our U.S. facility.

econoCom packages include (1 PS4 + 1 ECADAPTER) or (1 PS3)

The Answer to Your Question is Probably Here!

1. Sorry, NO substitutions. All econoCom B and C packages come with Value Series single muff headsets. To select different headsets, purchase the simple EC2 through EC6 and add the desired headset.
2. econoCom systems are interconnected with 2-conductor shielded microphone cables, terminated in 3-pin XLR connectors (male to female). Cables are NOT included. Phase is absolutely critical (no pin reversals)! We strongly recommend 18 gauge cable where runs are over 100 ft. and 20 gauge for anything shorter. See "Inter-station Cables and Y-Connectors" below for prices. If in doubt about cable, refer to "Cable Types and Sizes" on www.prointercomllc.com. All cables are terminated in genuine Neutrik® XLRs.
3. BP15, BP2 and BP1SL belt packs require Y-Cables for loop-through. Prices on following page.
4. Operating belt packs from a 24VDC source without a PS4 will result in unusable performance and may cause overheating, fire, or other serious damage. And it WILL void the warranty!

Listen Technologies ListenTALK Wireless

ListenTALK uses Near Field Communications to provide duplex communications. A simple clip added to a transceiver makes it Group Leader. Other transceivers are added to the group by touching back to back with the Group Leader or a Group sub-Leader. Connecting to Pro Intercom is done using the AD903 adapter and our C3M-105 cable.
